ADP* Ingénierie is above everything a community of 400 experts, all of whom share the same passion for the airport world and passenger experience. They share the same objective: using their expertise all over the world to help you succeed. They design, renovate and expand or optimize your infrastructure and they provide you with advice throughout the entire life cycle of your airports. With over 70 years of experience from the Groupe ADP to draw on, coupled with a vision of the airport of the future, ADP Ingénierie engineers and architects work together alongside you with a pioneering spirit. It is not merely a question of doing well, but also of having the passion of those who are in search of new and better answers to your specific challenges — those of today and especially those of tomorrow.

*Aéroports de Paris
We firmly believe that your airport needs to be an attractive and efficient hub and a natural extension of the city connected to the world. Every day, we work together and with you to build specific solutions to meet the needs of today while considering your challenges for the airport of tomorrow. Our main goal is to support you in the long run with a real partnership through the entire life cycle of your infrastructures.

Our unmatched ability to go beyond your stated needs and understand your underlying needs is what differentiates us in the market. We push boundaries, we create tailor-made solutions, and, within our own company, we think in a multidisciplinary way. This we can state emphatically because we are the brainchild of one of the largest airport operators in the world, and we are essentially cut from the same cloth as you.
A 360-DEGREE APPROACH FOR ALL

Whatever the size of your airport and scope of your project, we support you along the entire airport value chain. This is what we call “360-degree expertise”. We are familiar with all the different trades needed to run your airport smoothly, and we are experts at handling the specifics involved in interacting with the airport authorities and partners, airlines, air traffic control, fire service, police, customs and retailers, as well as with you directly on the most specific questions in terms of flows, processes, baggage, income, user experience and information systems, for example. We speak the same language as you, with the same passion: All things airport!

NEAR YOU, ALL OVER THE WORLD

The close and trusting relationships that we build and will build with you over the long term are vitally important to us. This is why our three business units in Paris, Dubai and Hong Kong and our branches in sixteen other countries place our engineers and architects as close as possible to your airport, wherever it is in the world and whatever its size.
We understand all the problems involved in running an airport. It’s in our genes. We grew up with the Groupe ADP — one of the most emblematic operators today. And we support a large number of airports and hubs; some are among the most important in the world.

Sir Seewoosagur Ramgoolam International Airport - Mauritius.

Muscat International Airport - Oman.
A DIFFERENTIAL APPROACH TO BE LIKE YOU

Empathy, boldness and creativity are the key words that describe our approach on each mission. Applied to the airport world and its specific characteristics, they allow us to implement projects that are original, successful and answer your needs.

WE MUST UNLEASH ALL OUR CREATIVITY TO INNOVATE AND CO-DESIGN TAILOR-MADE SOLUTIONS WITH YOU.

“We will never copy and paste a solution from one airport to another. We design tailor-made solutions, because only a finely tuned solution can be unique.”

Hélène B, Deputy Director, BU Dubai

WE NEED TO KNOW YOU INTIMATELY TO SUPPORT YOU EFFECTIVELY.

“With more than 46 nationalities working at ADP Ingénierie, we know how to be accessible to all cultures.”

Damien M, Business Developer, Dubai

FOR US, RESPONDING TODAY ALSO MEANS ANTICIPATING TOMORROW.

“If our clients have no problems running their infrastructure, this is our greatest success.”

Olivier G, Head of Strategy, Paris

ENSURING YOUR SATISFACTION AT ALL COSTS SOMETIMES MEANS THAT WE PUSH BOUNDARIES AND INTELLIGENTLY THINK OUTSIDE THE BOX.

“In South Korea, we had to review the construction of a new airport. But we also realised that we could redevelop the old one and expand it, and that’s what we proposed instead of a new site. That’s what ADP Ingénierie is all about – being an agile company, looking at all the options to save money and/or make money for our clients.”

Philippe Q, Head of Knowledge Management, Paris
A SERVICE OFFERING ADAPTED TO YOUR EXPECTATIONS

We constantly update our range of services to take account of changing airport issues: security, safety, environmental standards, energy-related issues, new services, big data, etc. Our internationally recognised architects and engineers break new ground every day on these issues, with the help of the latest digital technologies. Our aim: to increase the performance of your airports both in terms of their operations and their profitability.
1. UNDERSTAND THE BACKGROUND AND THE ENVIRONMENT
Research. Collaborate
Our 400 or so experts are professionals with curious minds and used to working within multicultural teams. During this phase, we will foster partnerships with local experts in order to best respond to the issues faced by all stakeholders.

2. GENERATE IDEAS
Develop. Improve. Repeat
We will of course capitalize on tried and tested solutions: almost 750 references, not to mention the many skills available within the Groupe ADP, we will seek out recognized solutions while always striving to be innovative.
From the outset of the design phase, we show how the solutions evolve over time and in their entirety, in functional, operational, maintenance and budgetary terms.

3. IMPLEMENT
(Co)Design. Refine. Do
Rethinking the airport is our daily business. We believe that the best way to bring our proposals to life is to involve you in our design work. For us, having the client involved on a daily basis in the project design is a guarantee of efficiency and success.
The digital tools that we use (3D, virtual reality, BIM and simulation software) involve you daily in the design process from the very beginning of our work. Deploying all or part of the team dedicated to your project to work at your side promotes this approach, as well as making it easier to work with the local partner if there is one.

4. TRANSFORM
Support the change
In accordance with the task entrusted to us, we make sure that we support all stakeholders to guarantee the success of your project. At each stage, this approach takes into consideration the security and regulatory issues related to the sustainable operation of an airport and incorporates best practices in terms of environmental protection.

ATTENTION AND DISCUSSION AT THE HEART OF OUR METHODOLOGY
Our methodology is divided into 4 phases which complete the relationship we share with you thanks to the proximity, the creativity, the co-design and the overall support. This approach is unique as it is based on more than 70 years of experience in airport engineering, in Paris and around the world.
DEDICATED RESOURCES TO INNOVATION FOR YOUR PROJECTS

Anticipating the upcoming constraints of your airport calls for innovative solutions. This is why ADP Ingénierie and Groupe ADP put innovation at the center of their day-to-day activity. We created teams dedicated to innovation, able to stay alert and anticipate the latest discoveries related to our core business.

1. OPEN INNOVATION/PARTNERSHIPS
We create partnerships with start-ups which possess complementary skills. This synergy gives us the opportunity to innovate while helping start-ups to grow faster.

2. PASSENGER EXPERIENCE
We analyze everything that contributes to a positive passenger experience and identify the key players. This gives ADP Ingénierie an edge as an “integrator” but also as an “advocate”.

3. TOOLS (BIM/SIMULATION/VR/…)
Simulation or VR tools, BIM bring you a brand new experience of your project from its beginning. These tools make daily management of your infrastructures easier and are really capable of transforming your experience of the airport.

4. HR PERFORMANCE
Innovation also involves our teams. Having the best talents and retaining our team members give us the possibility to offer the right set of skills and, doing so, prepare the future to always propose the best solutions for your projects of today and tomorrow.
